

Virtual Desktop

Only £56 per month

Virtual Desktops - VDIs

Let us take care of all your computing needs with a Citrix Virtual Desktop running Windows 7 and Microsoft Office 2010, fully licensed. You can access your individual user interface from any device – desktop, laptop, thin client, tablet or iPad - from anywhere with an Internet connection.

Productivity is boosted as employees have access to the latest technology without any investment in the resources and skills required for upgrades. Employees also benefit from increased mobility with access to their virtual desktop from any corner of the world which improves productivity and decreases office space expenses.

No data is stored on your device, so you never have to worry about proprietary data falling into the wrong hands if the device itself is lost, stolen or breaks. Since all the data and applications are centralised in 'The Cloud', a virtual desktop makes it vastly easier to enable and enforce processes and procedures to ensure security, privacy and other best practices. Virtual Desktops come with a guarantee of 100% network uptime, and are provided with the latest version of Kaspersky Antivirus for complete virus protection.

All desktops are based on our multi-tenanted, secure platform. The scalability and resiliency are unmatched in our industry, ensuring your data is protected at all times. We have achieved ISO27001 accreditation - the highest standard in data security in this arena.

Only £56 per desktop, per month
